## Comsearch to Manage Wireless Spectrum For CTIA at Super Mobility Week 2014

ASHBURN, Va.--(BUSINESS WIRE)-- [CTIA-The Wireless Association](#)® has selected [Comsearch](#), a CommScope company, to serve as the official spectrum manager for the 17<sup>th</sup> consecutive year at CTIA's annual trade show. To ensure exhibitors may demonstrate their products and services to maximize their business opportunities, Comsearch engineers will be providing pre-show spectrum usage coordination with area licensees as well as testing, monitoring on-site and troubleshooting throughout the event.

"[Super Mobility Week](#) is a multitude of trade shows happening at the same time and within relatively close proximity of each other, which can be a challenge since there are numerous vendors who want to demonstrate their products and services. To ensure all of these demonstrations work well while maintaining a high quality of wireless service for SMW attendees and Las Vegas residents and visitors, we will work with the carriers and other involved parties throughout the week," said Chris Hardy, general manager, Comsearch.

"During our trade show, CTIA becomes one of the largest spectrum users in the U.S. so we understand the challenges to ensure this finite resource is put to its highest and best use to meet user demands. This is one of the many examples we use advocating before policymakers to make more spectrum available, because meeting consumers' growing demand for mobile broadband is challenging, but critically important to remaining the world's best wireless industry that continues to lead in innovation, investment and economic impact," said Meredith Attwell Baker, CTIA President and CEO.

Comsearch has been a pre-eminent global provider of spectrum management and wireless engineering products and services for almost 40 years. The company offers commercial and government customers innovative solutions to the challenges posed by 21st century wireless deployments. Comsearch offers a variety of services and solutions to assist in spectrum auctions such as the Federal Communications Commission's upcoming AWS-3 Auction scheduled for November 18, 2014.
